OBJECTIVE

As a dynamic and versatile Electrical and Electronics Engineering (EEE) professional, excel in managing both EEE and IT-related tasks, offering a unique blend of technical expertise across multiple domains. With strong multitasking skills and a keen ability to adapt, I bring innovative solutions to complex engineering and IT challenges. My experience includes circuit design, power systems, embedded systems, and proficiency in IT tools such as networking, programming, and software integration.

KEY SKILLS

- **Programming Languages:** Basics in Python, C, C++, Java
- **Cloud Computing:** Microsoft Azure
- **MS office:** Word, Excel, PowerPoint
- **AI TOOLS:** Gen AI, Open AI
- **Personal Skills:** Problem-Solving, Leadership, Good Communication
- **Languages Known:** English, Tamil

PROJECTS

- **IoT Based Smart Touchless Water Dispenser | Project**
 - Developed a functional IoT-based prototype to automate water flow using an infrared (IR) sensor
 - Integrated sensor modules with microcontroller units to detect hand movement and trigger water flow
 - Applied knowledge of embedded systems and Internet of Things for real-time automation
 - Gained practical experience in sensor interfacing, circuit integration, and IoT project development
 - Enhanced understanding of contactless technology applications in hygiene and resource conservation
- **IoT-Enabled Smart Irrigation System with Real-Time Monitoring | Project**
 - Designed and deployed an intelligent irrigation system using the ESP8266 microcontroller and soil moisture sensors to automate water distribution based on soil condition
 - Integrated cloud platforms (e.g., Blynk/Thing Speak) for live monitoring, remote control, and alert notifications
 - Enabled mobile-based user interaction for real-time data access and decision-making
 - Implemented energy-efficient hardware design for sustainable operation in remote areas

INTERNSHIPS

Virtual Internship on Data Analytics and Visualization Job simulations, Accenture (via Forage) | Internship

- Understood the end-to-end data analytics process in a business consulting scenario
- Cleaned and pre-processed raw datasets for meaningful analysis using Excel and basic analytical tools
- Built data models to uncover trends and generate insights relevant to business performance
- Created interactive data visualizations and dashboards to support decision-making
- Delivered a simulated client presentation focused on data storytelling and business recommendations
- Developed communication, analytical thinking, and presentation skills in a corporate-style setting

WORKSHOPS AND PRESENTATIONS

Idea Presentation - KRCE | Presentation

- Presented a comprehensive idea on implementing IoT solutions in home appliances.

Texas Instruments -NIT Trichy's 2024 | Workshop

- Acquired practical knowledge of embedded C programming using TI MSP microcontrollers
- Explored GPIO configuration, timer operations, and real-time embedded applications
- Collaborated in hands-on sessions guided by industry professionals from Texas Instruments.
- Built and tested basic embedded circuits using development boards
- Learned debugging techniques and software tool usage for embedded development
- Interacted with Texas Instruments engineers and received insights into industry applications and career paths

EDUCATION QUALIFICATION

BACHELOR OF ENGINEERING (2022-2026)

Electrical and Electronics Engineering

K. Ramakrishnan College of Engineering (Autonomous)

CGPA – 8.28

HIGHER SECONDARY SCHOOL (2022)

Cauvery Global Senior Secondary School

Percentage – 70.1

SECONDARY SCHOOL (2020)

Aurobindo International School

Percentage – 83.6
