Jurong, Singapore – 628924

Mechanical Technician (Diesel Engine)

Summary

Handles multiple responsibilities and challenges while providing exceptional customer service. Passionate about providing quick and proper solution to customers. An experienced professional in maintaining, servicing and troubleshooting of new generation high speed Singapore police patrol boat systems which includes Marine Diesel engines (MTU), Diesel Generators, Waterjets, Transmission, Pumps, Motors, Valves. Versatile, accomplished, and results-driven service professional with 3 years' experience and 6 years' experience in Automotive car repair, Maintenance and troubleshooting.

Key Skills

- Engine maintenance & Overhaul
- Technical Troubleshooting
- Problem analysing and solving
- Workshop maintenance
- Knowledge about safety & 5'S
- Drawing Reading
- Knowledge of Measurement gauges & Power tools
- Repair & Service
- Customer Support
- Report Making
- Document Maintenance
- Team work
- Team leading ability

Training Certificates

Training: ITE Skills Evaluation, Singapore - Rigging and Material Handling.

Training: NTUC Learning, Singapore – Perform at Work and Height

Training: Penta CAD, India – Foundation course on Drafting cad – Auto CAD

Training: Ever safe Academy Singapore – Certificate in CCTV Installation and Surveillance Systems

Education

Diploma Mechanical Engineering (DME) 2010 To 2013 – 73.29%
Alagappa Polytechnic College – Karaikudi, Tamil Nadu.

High School Education (SSLC) 2010 – 88.8%
St Marys Higher Secondary School – Pudukkottai, Tamil Nadu.

Work Experience

Senior Mechanical Technician – 5GPT Singapore Police Boats

November 2023 To till date

Chieftain Pte Ltd, Singapore (For ST Engineering Marine Ltd) – Brain Islands, Singapore

Responsible for handling 12 no's 5GPT Police boat maintenance, service and trouble shooting

- Main Engine MTU 2000 (10V2000M96L) Maintenance and troubleshooting
 - a. Performing QL1, QL2 & QL3 maintenance procedure as per OEM procedure.
 - b. Professional in carrying out the engine maintenance like filter replacement, valve lash
 - c. Having experience in using the MTU engine special tools and measuring gauges like Torque wrench, Injector puller, HP line alignment tool, Refractometer & Vernier calliper
 - d. Experience in leading a team and performing QL3 maintenance including replacement of fuel injectors, cylinder inspection using endoscopic tool, & turbo charger replacement
 - e. Replacement of sub-assemblies like pumps, fuel distributor line, waste gate valves, cylinder heads, Charge air cooler, coolant cooler, HP fuel pump control block, thermostat, EIM& ECU
 - f. Dismantling, cleaning and assembling of coolant heat exchanger plates.
 - g. Troubleshooting of main engine alarms includes, issue with engine starting,
 - h. Trouble shooting engine controls, fault finding in EIM, ECU and engine sensors, Starter motor and alternator.
 - i. Check DC battery conditions and replace the battery as per plan
- DG set service, troubleshooting & component replacement:
 - a. Engine oil and filters replacement
 - b. Troubleshooting of defects like, high coolant & exhaust temperature, DG not starting.
 - c. Replacement of engine fuel injectors, HP fuel pump, coolant pump, coolant heat exchanger, charging alternator belt, sea water pump & actuator.
 - d. Check and replace DC batteries as per Preventive maintenance plan
 - e. Check resistance of sensors and replace the sensor if spoil
- Waterjet maintenance
 - a. Waterjet hydraulic oil heat exchanger servicing.
 - b. Greasing of hydraulic cylinders and calibration (Steering & Throttle).
 - c. Check every month WJ panel wiring, terminals and modules and replace modules if necessary
- Gearbox maintenance and trouble shooting
 - a. Trouble shooting of gearbox alarms – checking and replacing gearbox control block, clutch-in ahead & astern plug-in connectors.
 - b. Replacement of gearbox anodes and Servicing of gearbox heat exchangers.
 - c. Gearbox temperature and shaft speed sensor reading monitor and checking

Mechanical Technician – 5GPT Singapore Police Boats

November 2022 To November 2023

Chieftain Pte Ltd, Singapore (For ST Engineering Marine Ltd) – Brain Islands, Singapore

- Responsible for starting the boat daily morning for police patrol purpose.
- Starting the boat includes switching-on the boat systems includes Main engines, Gear box, Waterjets, DG sets, electrical breaker, batteries, sea chest valves, public address systems, navigation displays, radar systems, CCTVs, navigation lights
- **Daily maintenance checks: -**
 - Main Engine – MTU 2000 (10V2000M96L) Checking of engine oil and coolants, operation of main engine, monitoring all engine parameters.
 - DG Set – Fisher Panda (60 KVA) Monitoring of DG parameters, checking external leaks of coolant & sea water & DG load transfer
 - Waterjet – Kongsberg Checking of hydraulic systems and checking the function of waterjet cylinder and bucket movements.
 - Aircon – monitoring compressor pressure, gas level, sea water pump operation & cooling coil unit.
 - Navigation System – Checking the function of internal and external speakers of the boat, checking navigation lights includes search lights, flood lights and e-lights.
 - FIFI, David crane & Anchor – Checking the operation and functionality load test of firefighting pump, crane and anchor chain.
 - Bilge Pumps – Checking the functionality tests of e-bilge pump, portable bilge pumps and its valves.
 - SCMS – Ship Control Management System, checking alarms history

Automotive Mechanic – May 2015 to October 2016 & January 2018 to September 2022 PR MOTORS (BOSCH CAR SERVICE), Tamilnadu, India.

- Write the proper job card for each vehicle as customer requirement and complaints
- Follow up the job should be divided among the appropriate workers and monitored to ensure that the work is being done properly and that it can be delivered to the customers on time.
- Check and Monitor and refill automotive fluids for example coolant, brake fluid and oil
- Inspect air filters and fuel filters for debris and replace them if required
- Clean and lubricate engine components with each car service job order
- Inspect and recalibrate brakes and replace when required
- Inspect and diagnose electrical and mechanical malfunctions with manual and digital diagnostic tools
- Check and inspect electrical systems and batteries
- Replace faulty parts and components if can't repair change new parts for example spark plugs, fuel injectors, shock absorbers, pipelines, suspensers, bearings, starter and alternator motors, wiper and wiper motors, lights, fuses
- Check for correct air pressure in tires, wheel alignment and wheel balancing
- Tighten or replace screws nuts, bolts and extra auto body components
- Serviced air conditioning systems, changed and topped off fluids and completed maintenance inspections
- Cleaned work area after finish work by sweeping and keep tools in proper designated area

Fabrication - December 2016 to December 2017
Techni hub IEA solution, Singapore

- DB & MSB panel Installation
- fabricated conduit pipes, cable tray, cable ladder fitting, switch box and power point box.
- Planning and marking the path of pipe lines as per drawings
- Using different power tools for cutting and drilling
- cable lying separated circuits based on electrical diagram for electrical components, speakers, sensors, switch box and power point box.
- Planning and execution new projects temporary lights, emergency lights and exit lights as per safety requirements
- Work involved reading blueprints and review of electrical layouts for new and existing plant construction.
- Cable pulling.
- Following always safety procedure and wear Perfect PPE at all times

Apprentice training (Quality Assurance) - April 2014 to April 2015
Brakes India Private Limited, India

- Inspection of the component at the receipt stage based on quality plan.
- New product parts dimension inspections as per drawing and cleared based on SAP plan with measurement gauges
- Sample inspection reports (SIR) created and send to ER&D.
- All export dispatch from Brakes India Pvt.Ltd to be verified in line with work instructions.
- Calliper brake assembly (Disc brake) and Brake Shoe (Drum brake part) traceability documents from raw material store to finished parts dispatch verified in line with production quantity on daily basis, after verification the same documents to be scanned and stored in Data management System developed by BI in date wise for easy access traceability.
- QA related engineering change note received from ER&D and change implementation to be follow up based on target date with concerns persons from QA After implementation same change to be closed as per check list.
- A calliper assembly fire wall inspection was done during safe launch period for new product sample as per supervisor guidance.

Personnel Data

Date of Birth : 12.03.1995

Nationality : Indian

Home Address : 19/2, Gandhi Nagar 7th street, Pudukkottai
Tamilnadu 622001
