Objective:

Detail-oriented Electronics and Communication Engineering Graduate with hands-on experience in digital design, VLSI and Embedded Systems. Strong analytical and problem-solving skills, expertise in C++, Verilog, and Cadence Virtuoso. Proven ability to excel in independent and team environments, eager to contribute to innovative projects. Seeking opportunities to apply technical knowledge and project management skills to real-world applications.

Education:

- B.E (Electronics and Communication Engineering) with 8.56 CGPA, SDM Institute of Technology, Ujire – 2025.
- PUC (Science), Shree Pushpa Mahalingappa Science PU College, Davangere – 2021.

Experience in Internship:

Intern – Physical Design and Verification, Teloquence Pvt. Ltd., Ujire, Karnataka (Feb 2025 – May 2025)

- Designed Data Memory and Instruction Decoder blocks for a RISC-V processor.
- Hands-on with floor planning, routing and GDSII using Cadence Innovus.
- Performed schematic checks using Virtuoso and supported timing and PPA optimization.

Project Details:

A Novel 32-Bit RISC-V Based Pipelined Processor Design (Feb 2025 – May 2025)

- Designed and implemented core blocks of a 5-stage pipelined RISC-V processor using Verilog.
- Simulated functionality using ModelSim and worked with Cadence Virtuoso and Innovus.
- Optimized Data Memory block area by ~86.5%.
- Executed DRC/LVS checks to validate layout accuracy against schematic and ensure design rule compliance.

GSM-Based Electrical Circuit Breaker for Safety of Electric Lineman (Sep 2024 – Jan 2025)

- Designed and implemented a GSM-based safety circuit.
- Utilized Arduino programming and UART communication.
- Implemented password authentication to prevent unauthorized access and ensure secure operation of the GSM-based circuit breaker.

LPG Gas Leakage Detector Using Arduino (Mar 2024 – May 2024)

- Designed a gas leakage detection system using Arduino IDE and C++.
- Integrated a real-time monitoring and alert mechanisms.
- Designed LPG gas leakage detector using Arduino to automatically turn off electronics items (bulbs, fans) for safety and restore them once gas is cleared.

Achievements – Curricular/Co-curricular:

- Certified in VLSI Digital Design, Chip Design, and Verilog Programming (Aug 2024)
- Certified in Introduction to Robotic Process Automation (Jul 2024)
- Certified in Machine Learning using Python (Nov 2023)
- Certified in Cybersecurity for Beginners (Jul 2023)

Design & Technical Skills:

- Programming & Scripting: C/C++, Python, Verilog, VHDL, TCL, Shell scripting
- EDA Tools: Cadence Virtuoso, Innovus, ModelSim, Arduino IDE, Solid Edge
- Technical Domains: Digital Design, Physical Design (RTL to GDSII), Cybersecurity Basics
- Operating Systems: Linux/UNIX
- Soft Skills: Problem-solving, Time management, Teamwork, Communication, Leadership, Innovation, Decision-making, Adaptability
