CAREER OBJECTIVE

A motivated Electrical & Electronics Engineering student seeking an opportunity to apply hands-on experience in embedded systems, IoT, and power systems. Eager to contribute technical skills, analytical thinking, and project experience to solve real-world engineering challenges while learning from domain experts.

EDUCATION

Malnad College of Engineering, Hassan B.E. in Electrical & Electronics Engineering	CGPA: 6.85 2021 – 2025
ST Johns Comp PU College, Mandya Intermediate in PCMB	77.66% 2019 – 2021
Christ the King English High School, Mandya Matriculation	84.32% 2019

PROFESSIONAL EXPERIENCE

SLN Technology, Bangalore — Military Hardware and Quality Engineer

Duration: Feb 10, 2025 – May 24, 2025

Assisted in motherboard design and performed ATL, HFT, Application level tests.

KPTCL, Hassan — Substation Maintenance Intern

Duration: Oct 18, 2023 – Nov 18, 2023

Studied real-time substation operation and instrument management.

Academor — Hybrid Electric Vehicle Intern

Duration: May 1, 2023 – Jun 30, 2023

Gained insight into electric vehicle motor functionality and its advantages over traditional vehicles.

Mipzo EdTech Pvt Ltd — Project Development Intern

Duration: Dec 25, 2023 – Jan 20, 2024

Mentored students in technology and robotics; developed a transmission line fault detection system.

PROJECTS

Multipurpose Agricultural Bot using Raspberry Pi

- Automated system for seed sowing and leaf disease detection
- Used Python, OpenCV, and Raspberry Pi for implementation
- Applied image processing and motor control algorithms

IoT Based Smart Transportation – Know Your Bus

Tracks real-time location, passenger count, and provides bus updates with seamless payment integration.

Hydroponics System

Cultivated plants using nutrient-rich water without traditional soil or inert support media.

Transmission Line Fault Detection

Developed a system to detect faults and prevent equipment damage without human intervention.

Step Down Voltage Regulator

Converted AC voltage to DC using a bridge rectifier for various applications.

RESEARCH & PUBLICATIONS

“Multi-Purpose Agricultural Bot Using Raspberry Pi” – International Journal of Multidisciplinary Research in Science, Engineering & Technology (IJMRSET), Vol. 8, Issue 5, May 2025. Impact Factor: 8.206

SKILLS

Programming Languages: C++, Python.

Hardware & Tools: Oscilloscope, Multimeter, Soldering Station.

Core Skills: Embedded Systems, IoT, PCB Design, Power Systems.

Soft Skills: Teamwork, Adaptability, Communication.

Electrical Power Systems: Generation, Distribution, and Transmission
Internet of Things (IoT).

Instrumentation Analysis.

Team Management and Collaboration.

Communication & Adaptability.

CERTIFICATIONS & VISITS

Level 1 – AI/ML Engineering

Soft Skills (Swayam – 12 weeks)

Impactful Dashboard Design

Diploma in Office Management with Nudi 4.0

Industry Visits: Elecnovo Pvt Ltd, Varahi Hydroelectric Power Plant

LEADERSHIP & ACTIVITIES

Student Coordinator – Electrical and Electronics Dept, 2021

NSS Leader, 2021

Project Designer – Mipzo (2022)

DECLARATION

I hereby declare that the information provided
